

PROFESSIONAL INTERESTS & SKILLS

I am a quantitative marine ecologist who is passionate about integrating statistical, mathematical, experimental, and computational approaches to unify evolutionary ecology across scales. My overarching research goal entails the use of theory-driven, fundamental science to better inform decision-making processes and ecosystem management in an ever-changing world.

Transparent and reproducible open science are at the core of my daily working routine, and I mostly use the R programming environment to code my projects. I was trained as a programming instructor by The Carpentries, and as such I organise my data, and maintain my projects under version control following standard practice.

FIELDWORK EXPERIENCE

I have joined multiple field trips along the Brazilian coast (Santa Catarina, Arraial do Cabo, Abrolhos Archipelago, Porto Seguro, Fernando de Noronha Archipelago), Central America (Panama and Cuba) and Australia (One Tree Island Research Station and the coast of New South Wales). These trips required intensive SCUBA diving, where I conducted fish transects, tallying individuals, species and sizes. I also collected specimens for myriad measurements including otolith ring counts, gut content analyses and genetic material. Some of this work was done in remote locations (Fernando de Noronha in Brazil and Jardines de la Reina in Cuba) – I have been trained by the Brazilian Navy to resist stressful and starvation situations at sea, including spending one entire day adrift under the sun without food or water supply.
